

SQL SERVER INTEGRATION SERVICES

MODULE 03 – LAB 05: EXERCISE 1: CONTROL FLOW: SQL EXECUTE TASK (SINGLE ROW/VALUE)

1. Launch Visual Studio.
2. In the Start Page, click Create new project.
3. In the SSIS Menu select Variables.

4. Click on the New Variable icon.

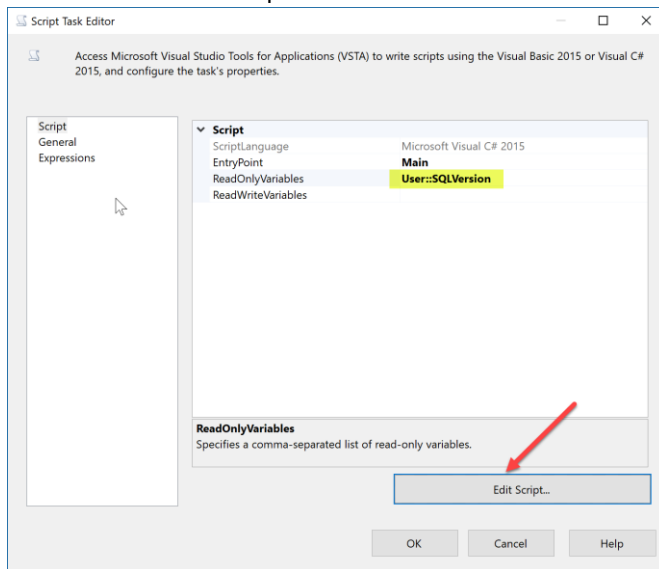

5. Rename the Variable to SQLVersion of String Data Type.

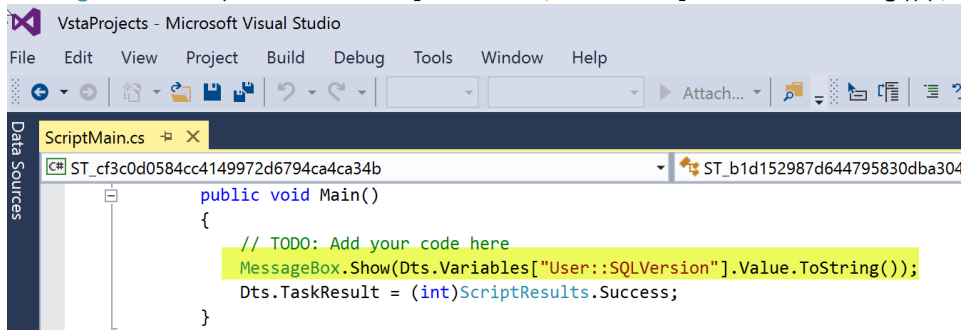

6. Double-click **Script Task** from SSIS Toolbox, to add onto the Control Flow canvas.

7. Set Script Task's ReadOnlyVariables property to User::SQLVersion in the Script Task Editor, then click on Edit Script.

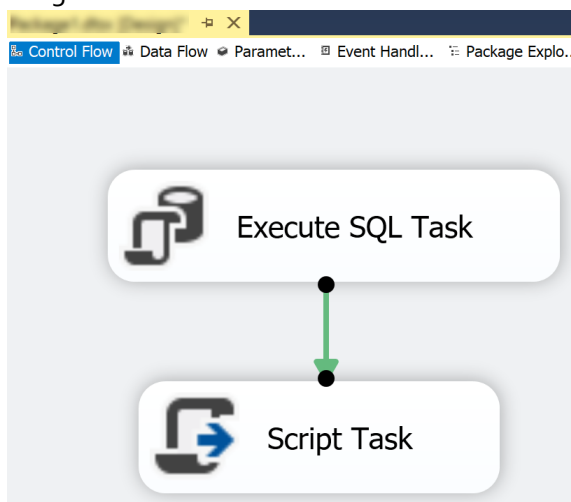

8. In the VstaProjects window, Add following code line into the main() block.

```
MessageBox.Show(Dts.Variables["User::SQLVersion"].Value.ToString());
```

9. Close the VstaProjects, and then click on OK to close the Script Task Editor Dialog.
10. Double-click on **Execute SQL Task** from SSIS toolbox, to add onto Control Flow canvas.

11. Drag Green arrow from Execute SQL Task to Script Task.

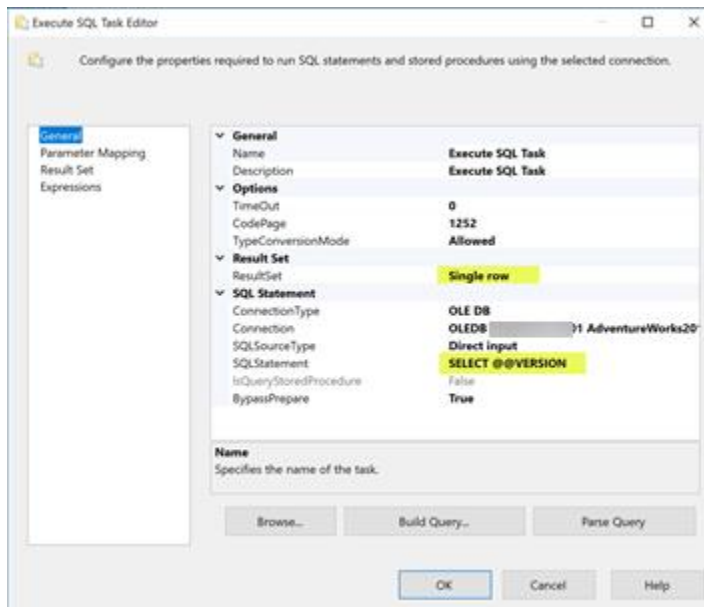

12. Double click on the Execute SQL Task on the Control Flow canvas and Set the Connection.

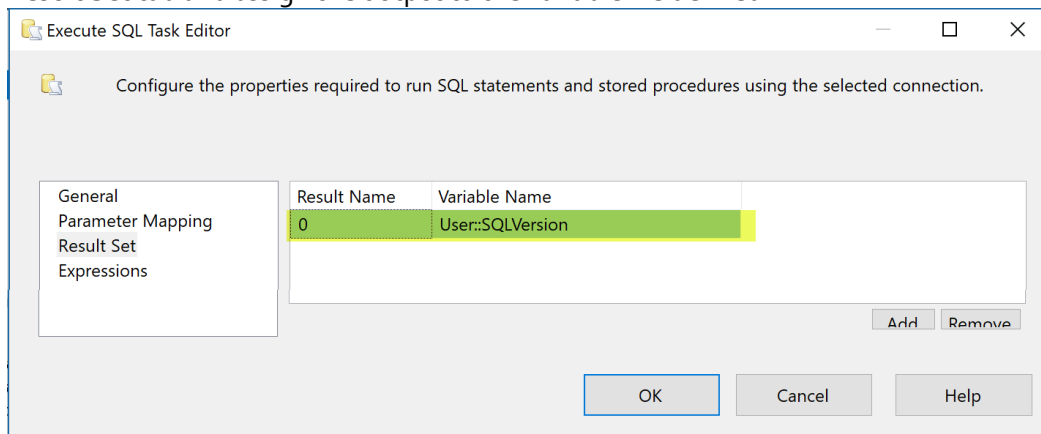

General	
Name	Execute SQL Task
Description	Execute SQL Task
Options	
TimeOut	0
CodePage	1252
TypeConversionMode	Allowed
Result Set	
ResultSet	None
SQL Statement	
ConnectionType	OLE DB
Connection	<New connection...>
SQLSourceType	<New connection...>
SQLStatement	OLEDB. AdventureWorks2012
IsQueryStoredProcedure	False
BypassPrepare	True
Connection Specifies the connection used to access the data.	

13. Set ResultSet to SingleRow and set SQLStatement to following script.

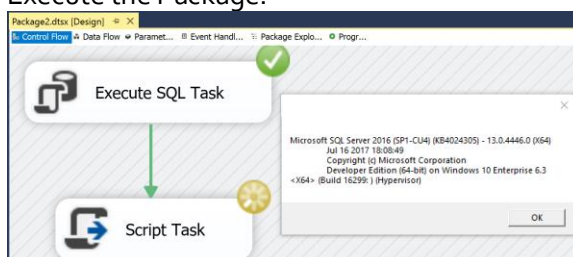

```
SELECT @@VERSION
```

14. After the data is returned we must capture it to a variable if we wish to use it later. Select the Result Set tab and assign the output to the variable we defined.

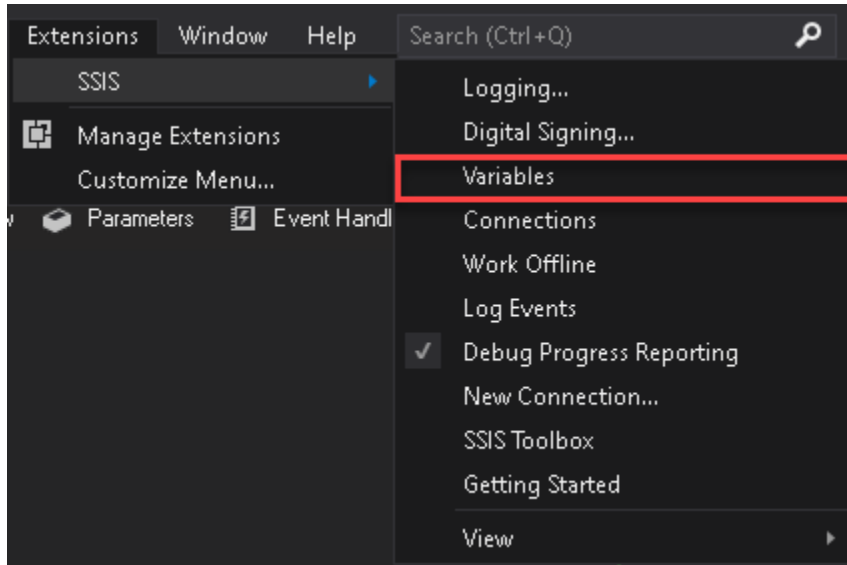

15. Click OK to close the Execute SQL Task Editor.
16. Execute the Package.

MODULE 03 – LAB 05: EXERCISE 2: CONTROL FLOW: SCRIPT TASK

1. Create a new package in the same project.
2. In the SSIS Menu select Variables

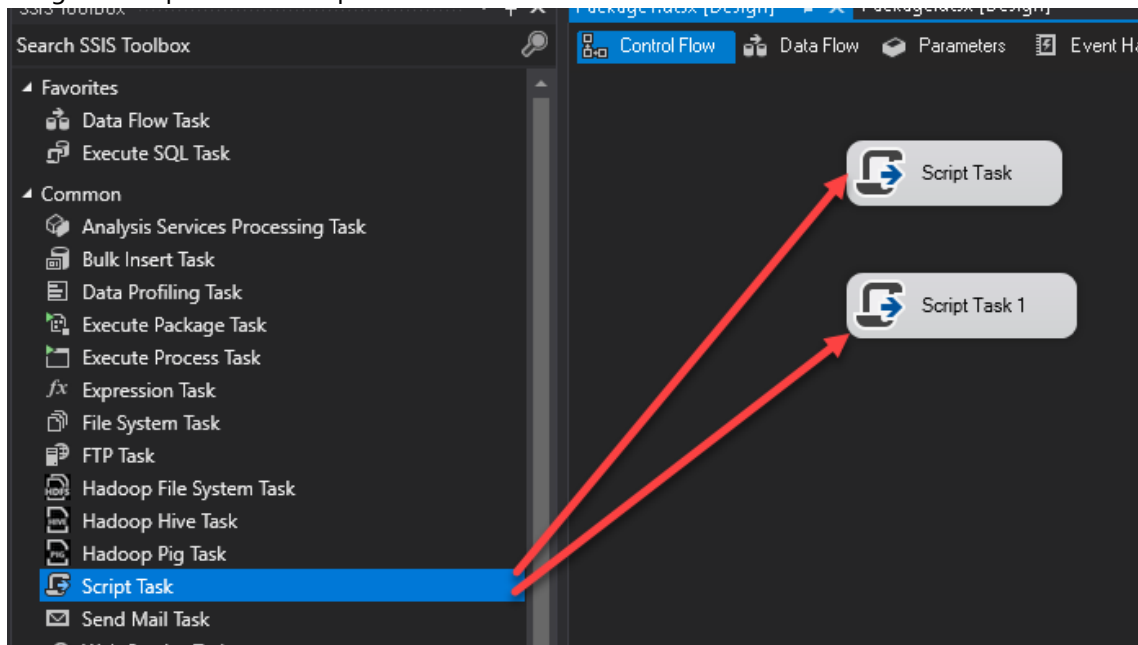

3. Click on the New Variable icon

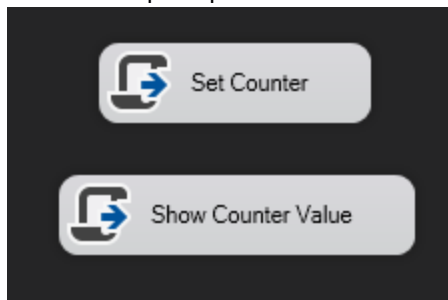

4. Rename the Variable to Counter. Notice initial value is defaulted to zero.

Variables			
Name	Scope	Data type	Value
Counter	Package1	Int32	0

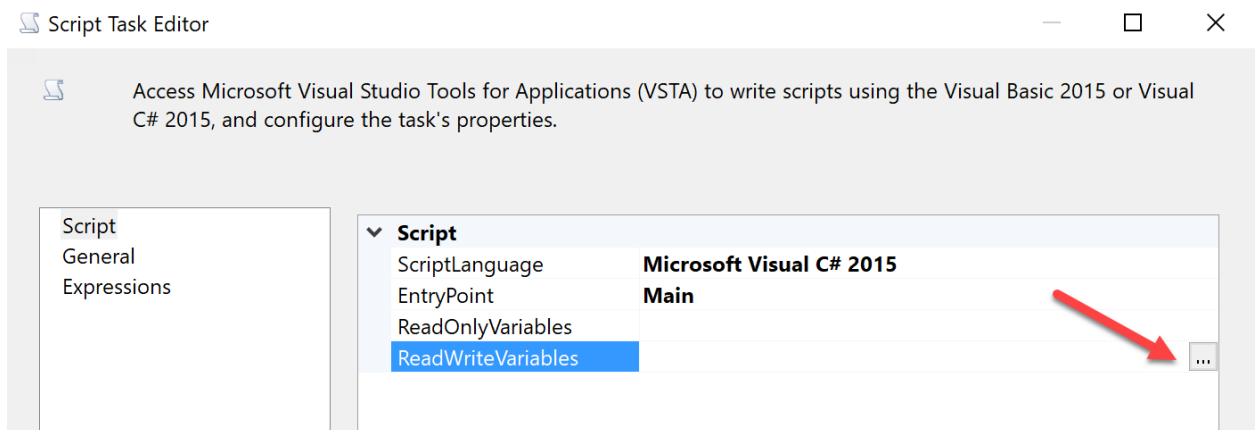

5. Drag and drop the Two Script Task onto the Control Flow canvas.

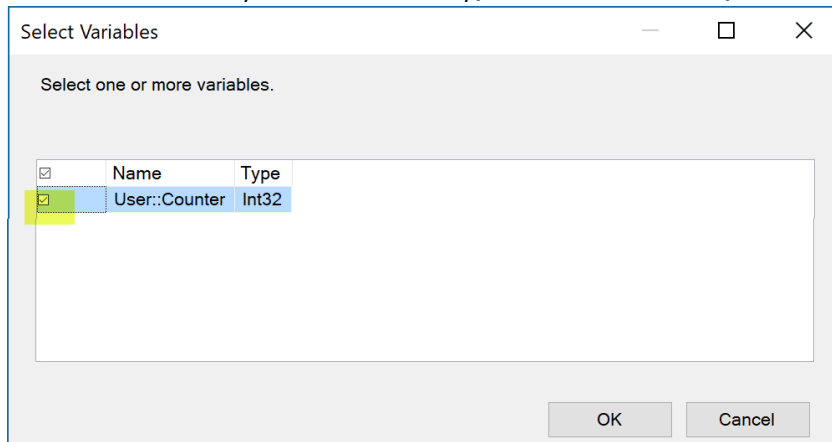

6. Rename Top script task to "Set Counter" and Bottom task to "Show Counter Value".

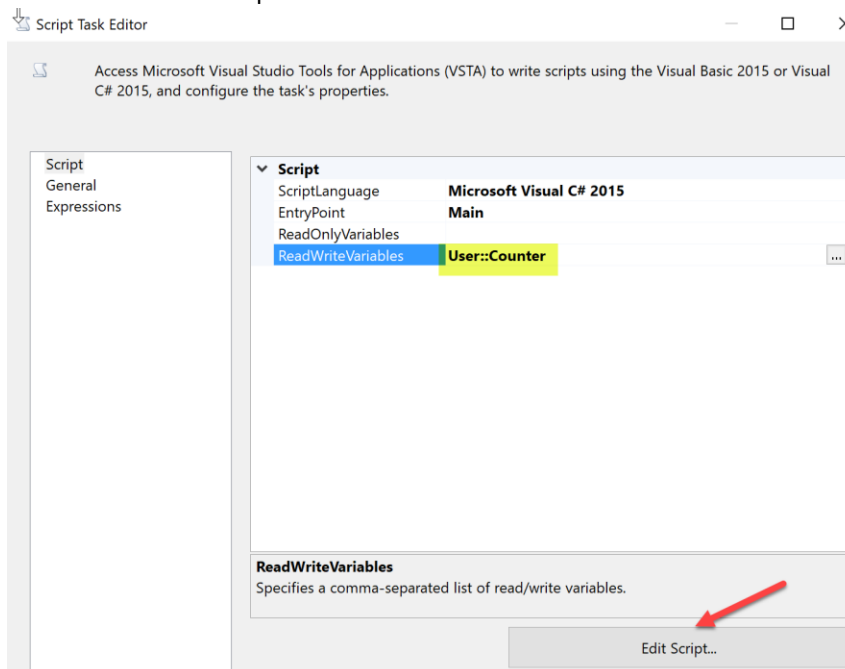

7. Drag the Green Precedence Constraint Arrow from the first task to the second task.
8. Double-Click "Set Counter" Task, since we will be assigning a value to the variable within the script task click on the ellipse button for the ReadWriteVariables

9. Select the Variable you want to modify, in this case Counter, then click OK.

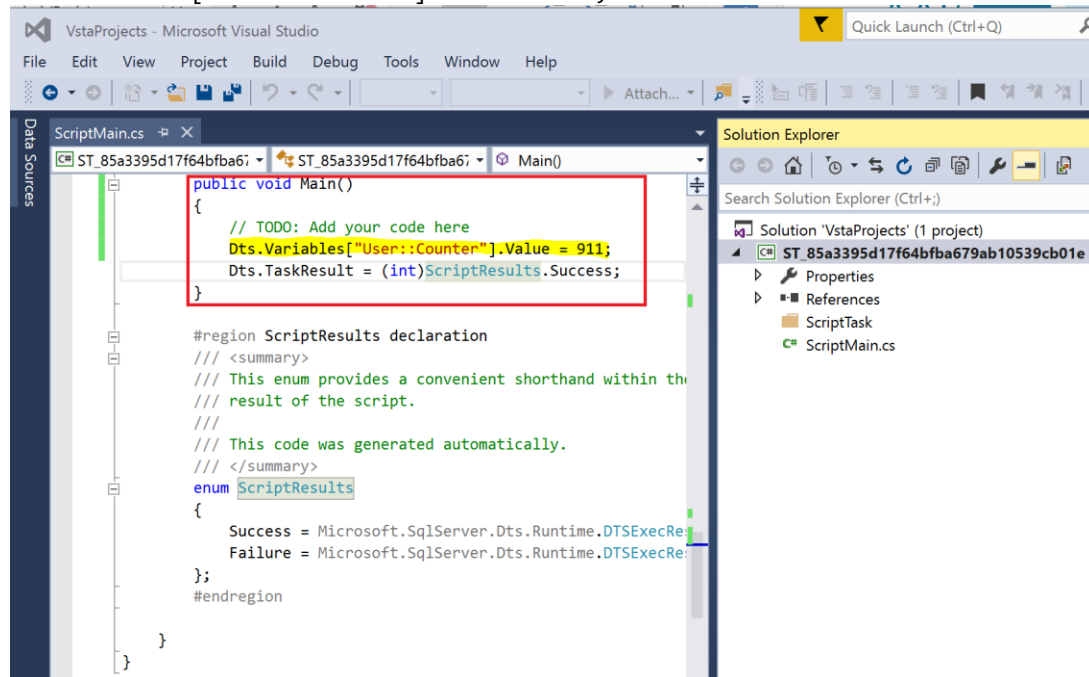

10. Click on the Edit Script Button

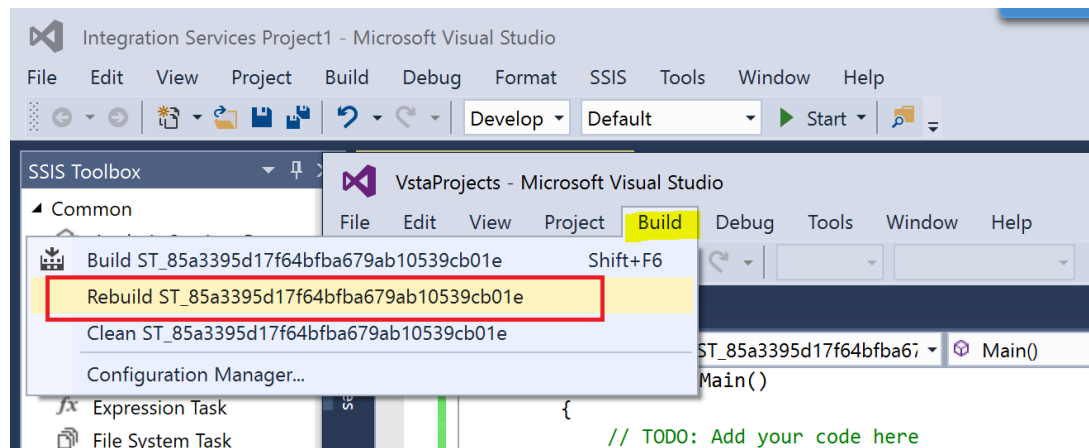

11. A Visual Studio Tools for Applications (VSTA) Scripting Windows will open, scroll down toward the bottom and the following code line to assign a value to in the Main() code block.

```
Dts.Variables["User::Counter"].Value = 911;
```

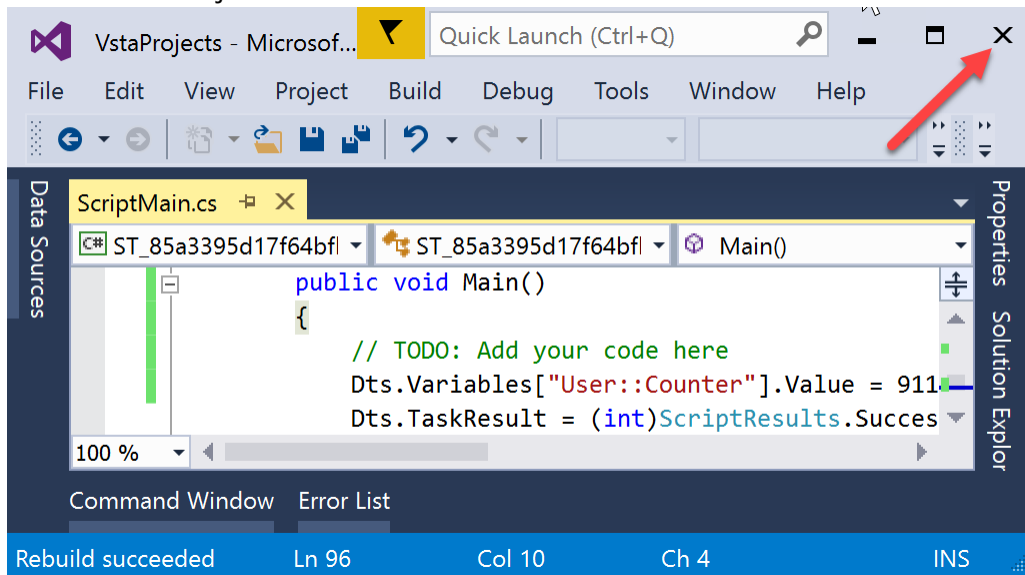

12. Ensure that you code syntax is correct, by verifying you can rebuild successfully. Click on Build menu and then select Rebuild.

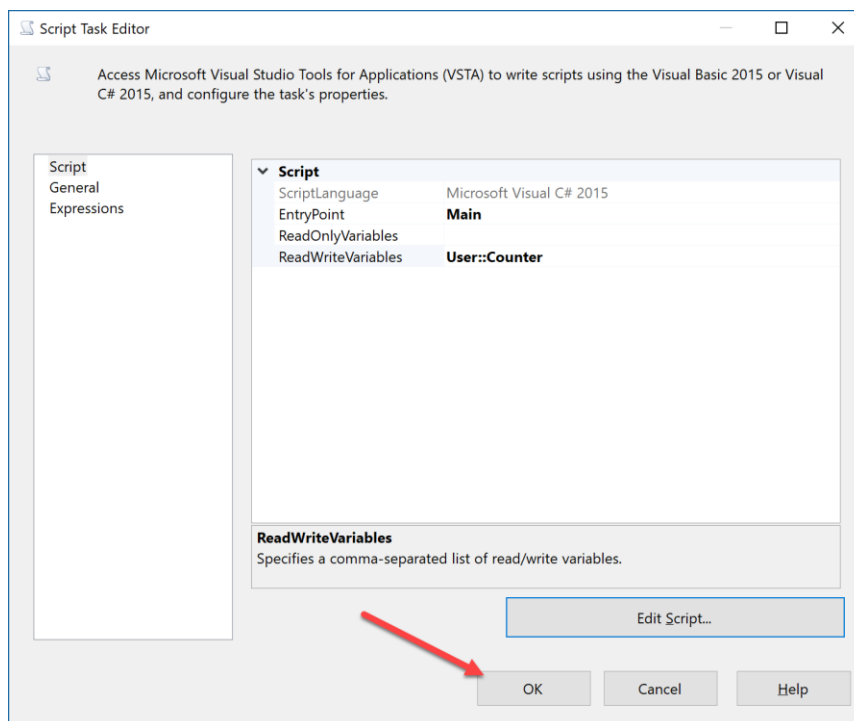

13. Exit the VSTAPROJECT window

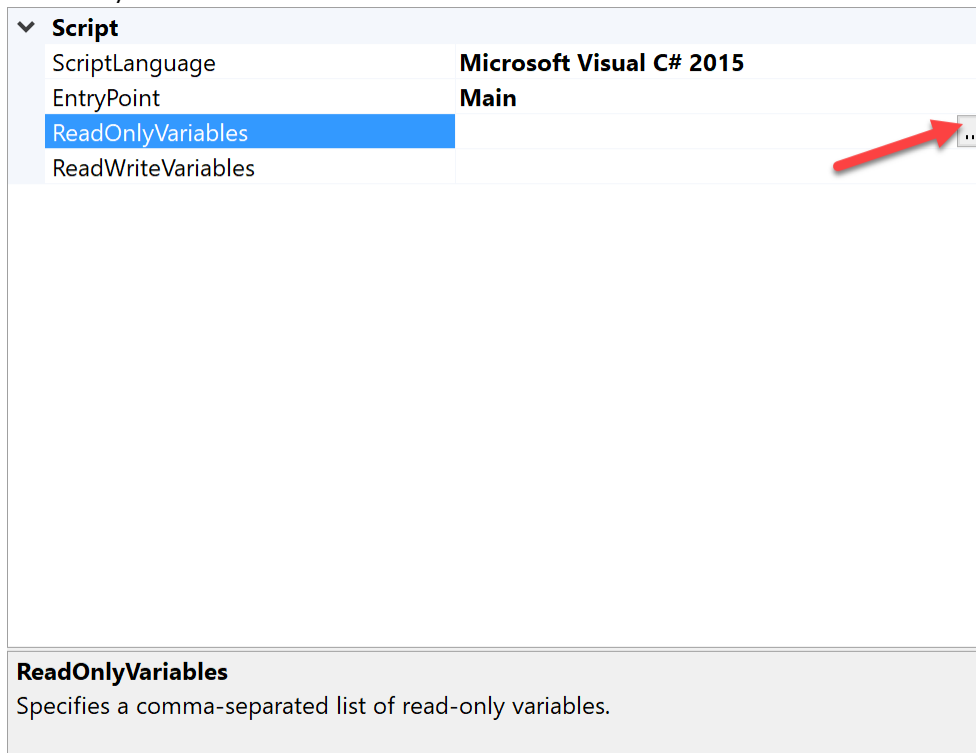

14. Click OK.

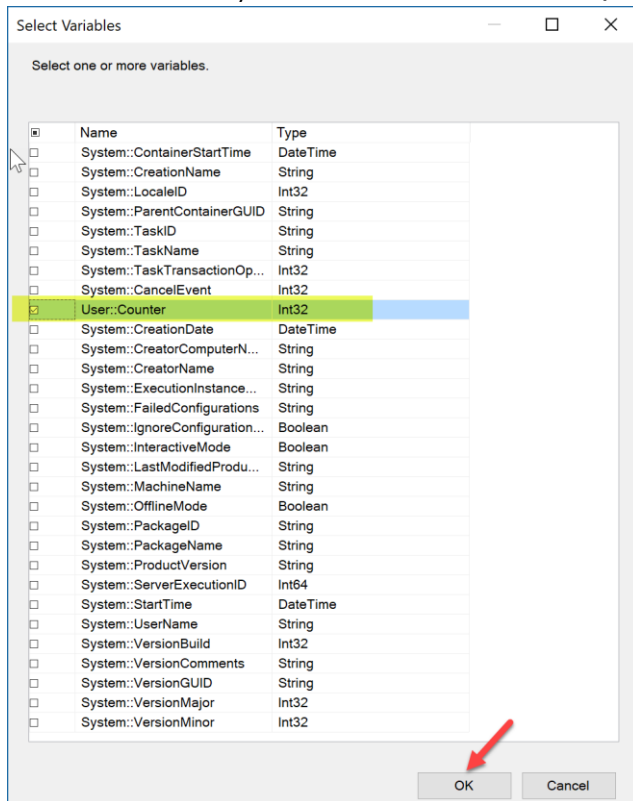

We will now set the next script task properties.

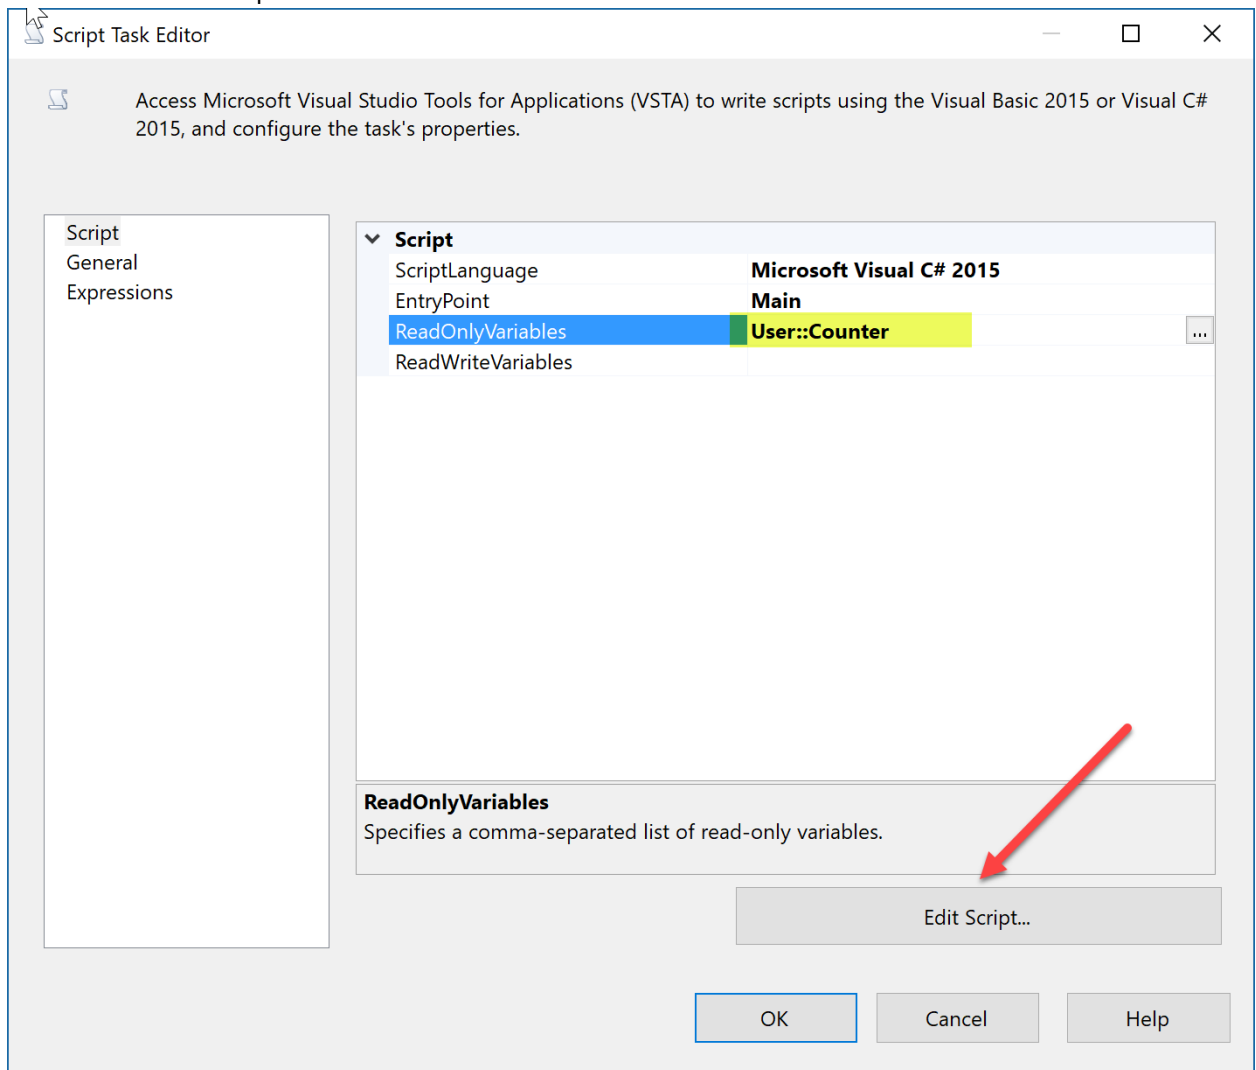

15. Double-Click the “**Show Counter Value**” Script, and then click on the ellipse button for ReadOnlyVariables.

16. Select the variable you want to retrieve values for, in our case Counter, then click OK.

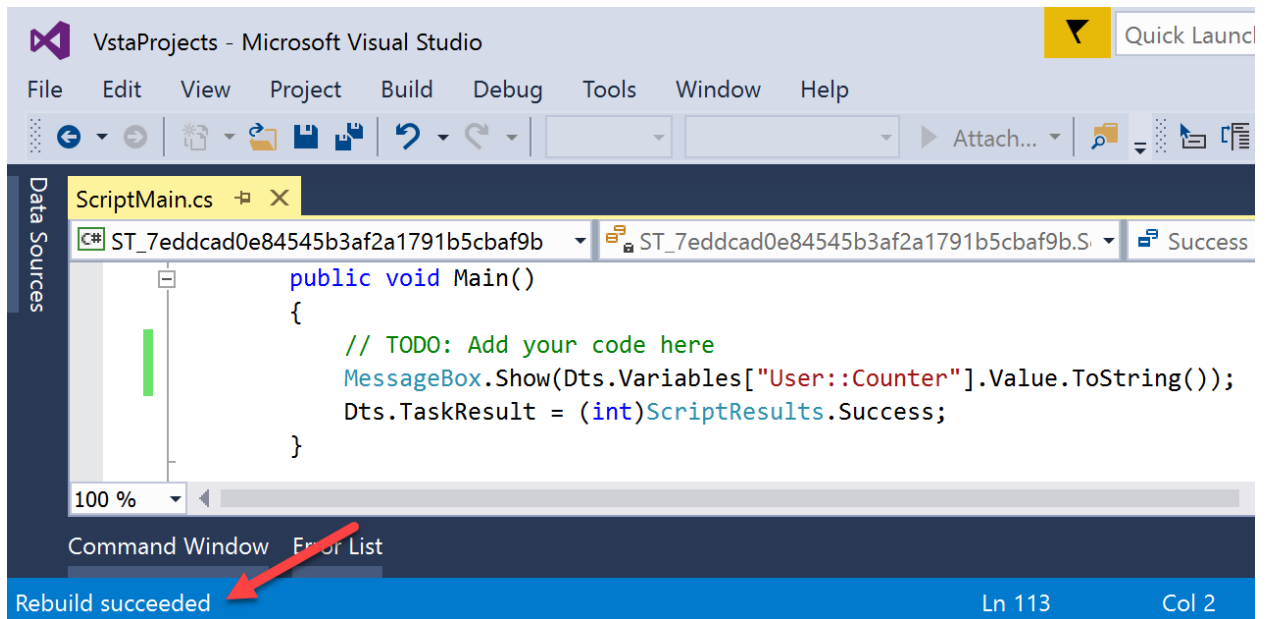

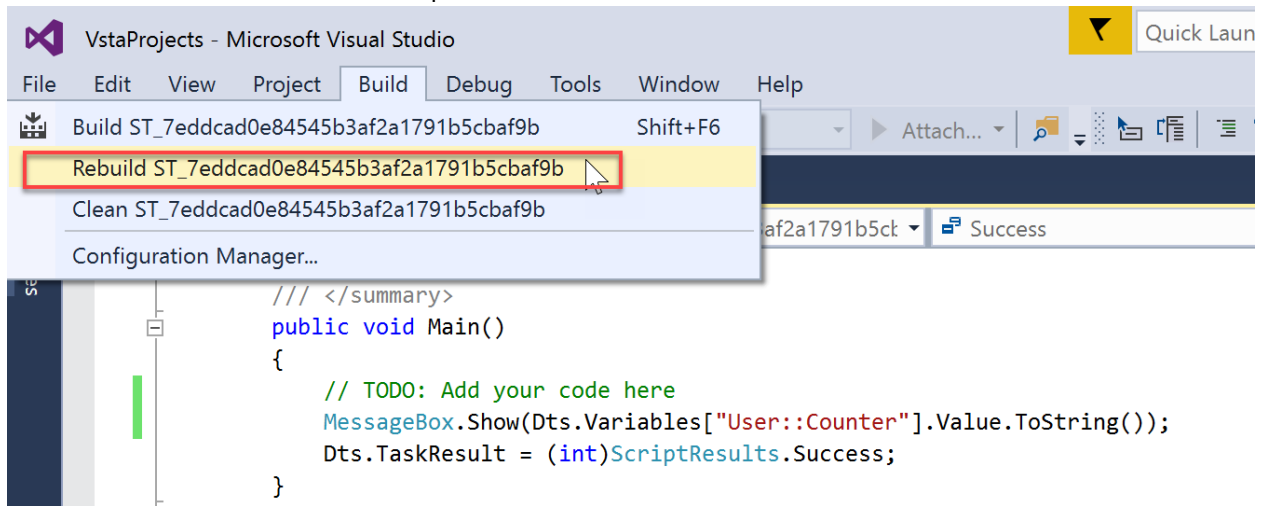

17. Click on the Edit Script button.

18. In VSTA window, Add the following line in the Main() code block. This will display the value of Counter in a prompt window.

```
MessageBox.Show(Dts.Variables["User::Counter"].Value.ToString());
```

19. Rebuild to ensure there are no compile errors.

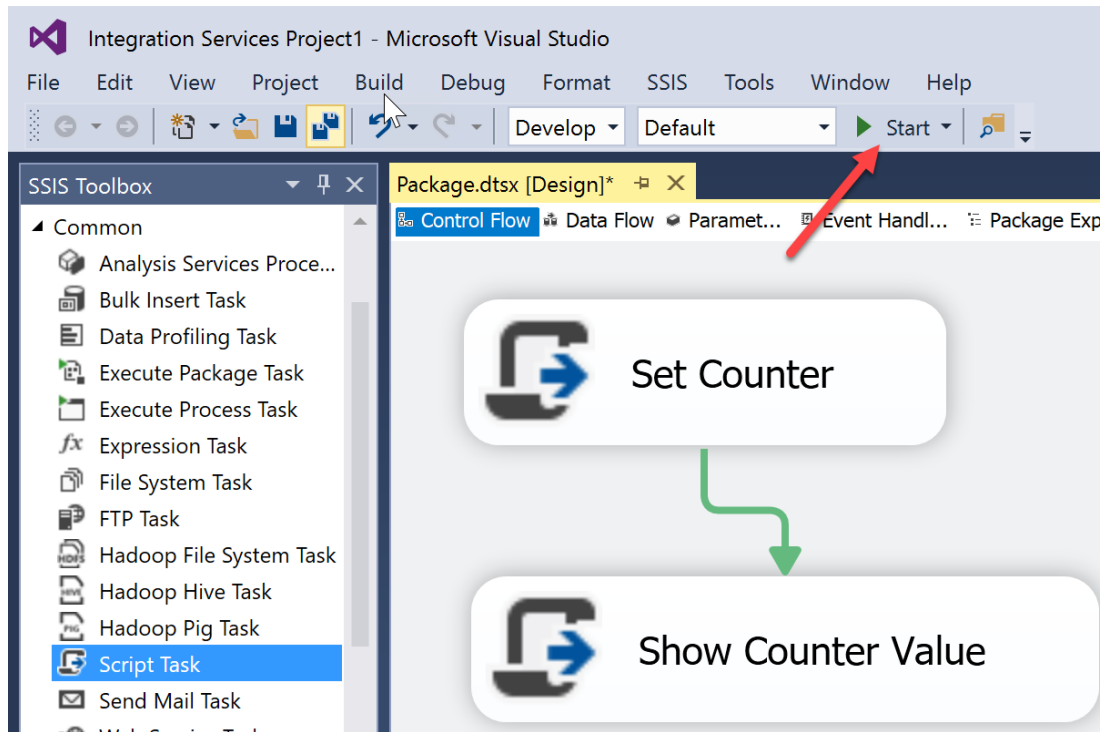

20. Close the VSTA window.

21. Click OK.

22. Click Start Button.

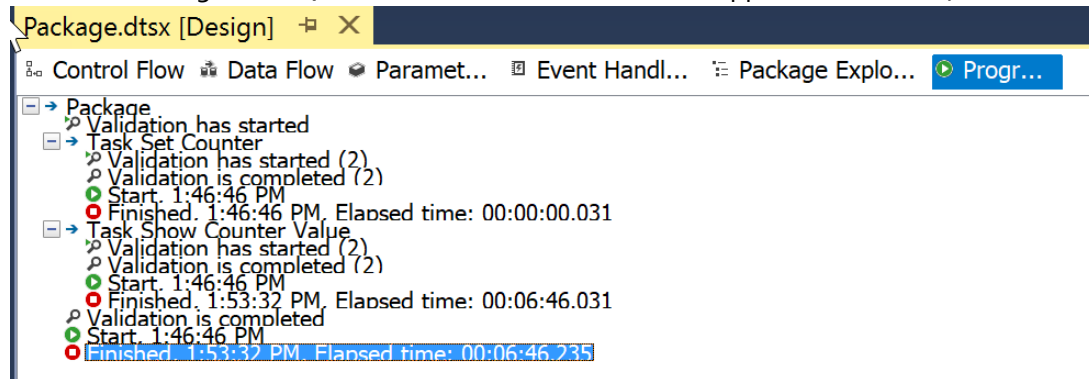

23. Notice Package is Running and displaying the assigned value. But is waiting for user interaction (clicking on OK) for the package to complete. Click on OK.

Tasks	Counter Value
Initial assigned when variable declared	0
Set to 911 within "Set Counter" script	911
"Show Counter Value" script Correctly show the new value set	911

The screenshot shows the Visual Studio interface with the 'Package.dtsx [Design]*' window. The 'Set Counter' task is marked with a green checkmark, indicating it has completed successfully. The 'Show Counter Value' task is marked with a yellow warning icon, indicating it is waiting for user interaction. A dialog box is displayed in the bottom right corner, showing the value '911' and an 'OK' button.

Look at the Progress Tab, and notice the execution time is approx. 6 minutes 46 seconds.

Let's find another alternative to not having to wait.

24. Modify the "Show Counter Value" Script, and

Replace following code

```
MessageBox.Show(Dts.Variables["User::Counter"].Value.ToString());
```

With the following code

```
bool fireAgain = false;
string description = "Counter Value= " +
Dts.Variables["User::Counter"].Value.ToString();
Dts.Events.FireInformation(0, null, description, null, 0, ref fireAgain);
```

25. Then run the Package again.

26. Look at the Progress tab now.
